

Testimonials

"I was so **amazed** that I could take **my sunglasses off**

and look through my new enclosure and my eyes were very comfortable and soothed. What a treat! This is a total new experience being out on the water with no sunglasses in my new cool2sea™ enclosure."

— Brenda Young

"I've had Clearview since 1990 and replaced one panel with cool2sea™ this past spring. WOW!

*I'm getting all cool2sea™ panels now! **It is easy on the eyes, it keeps me cooler and it is great at night!"***

— Capt. Joe Riley, Muff Diver Charters

The future is here

4U2SEA™

The Next Generation of Marine Enclosures

Your Path to the Future —
the **4U2SEA™ FRATERNITY MEMBER**
serving your area:

Enclosure History!

June 1989: Clearview, clearer than glass distortion free yacht enclosures are invented.

1990: "Track-to-Track" installations invented.

1990: Clearview makes a coated Swiss fabric its standard and helps launch that fabric in America.

1991: Manual for patterning, fabrication and installation of enclosures is written by inventor.

October 1991: "Life-time" thread is used in Clearview enclosure for "South Jersey Champion," a 63' Ocean Yacht shown at the Annapolis Boat Show. This thread is made standard thereafter and sets a new standard for entire industry.

January 1992: The name "Clearview" is dropped for an invented "easy" word that quickly becomes the most revered name in the industry.

February 1992: Display at Miami Boat Show introduces product internationally and begins education of public about all enclosure options through use of website.

March 1992: 2 Captains and a seamstress with no prior marine canvas knowledge taught by inventor for 2 weeks begin doing all "Jim Smith" boats. This, after just over 2 months in business.

June 1992: Patent is issued with 50 claims.

1992: Inventor installs enclosure on 58' Ocean Yacht at the factory.

September 1, 1992: Canvas fabricator for several major New Jersey boat manufacturers relents to consumers/builders demand for a better enclosure, signs license agreement and is taught patterning/fabrication and installation methods including track-to-track by inventor.

1993: panels slide open with "new" double track.

Around 1993: An unscrupulous (*our opinion*) marine canvas supplier expresses desire to buy in but is denied by inventor. Supplier then promotes his ~~new~~ sew-able polycarbonate with name ironically similar to advertised Acrylite used by inventor. Shortly thereafter calls from consumers asking why product yellows results in consumers continually being educated about polycarbonate by inventor.

1999: Inventor files patent infringement case against Barrett Enclosures to protect patent and his licensed dealers. After making attorneys wealthy, the suit is settled out of court nearly 3 years later with inventor receiving a check from defendant's insurance company and future royalties from defendant.

January 2012: Patent pending; **cool2sea™**.

It has been over 20 years since Clearview was invented, and NOW . . .

The future is here!

Ready to make history, again . . .

4U2SEA™

FRATERNITY OF FABRICATORS

The **4U2SEA™ Fraternity** of Canvas Craftsmen/Fabricators/Innovators worked together with some of the finest acrylic, clear pvc vinyl, coated fabric, acrylic fabric, pvc extrusion, thread, zipper and other material manufactures in order to create a viable catalyst for the “next generation” enclosure! The Fraternity, possessing an unprecedented combination of respect for tradition and an out of the box approach toward innovation, reviewed every aspect of current boat enclosures, scrutinized all available materials and took the initiative of commissioning new materials in order to create superior enclosures destined to be the next milestone for the canvas industry. Increased area of vision, cleaner look for borders and stronger materials have all been addressed.

Additionally, as a result of a more efficient system, Members of the **4U2SEA™ Fraternity** are able to offer enclosures that are easier on the pocket for boaters to acquire. What’s more, Fraternity Members are located in even the smallest niches of the marine market to better serve boaters. They are ready to install the future on your boat!

Boaters that know of an exceptional fabricator may have him or her apply to join the **4U2SEA™ Fraternity** (*qualifications and restrictions do apply!*) to become part of the future as well.

cool2sea™

PATENT PENDING

cool2sea™ acrylic utilizes a proprietary performance formulation to block 23% of the heat conventional enclosures transmit, thus keeping Captain, Crew and guest more comfortable. Further, bridges and aft decks able to attain only mediocre air-conditioning results due to green-house effect when fully enclosed, now find **cool2sea™** facilitating to a level of comfort not attainable previously.

Also comforting is the fact that **cool2sea™** blocks 98% of **all** Ultra Violet light! UVA, the most prevalent UV is present during all daylight hours, penetrates clouds, plays a major role in skin aging/wrinkling and causes mutations that can lead to melanoma as well as increases UVB’s cancer causing effects. In addition, UVA causes chronic damage to the eyes and is linked to the formation of cataracts and macular degeneration. A telltale sign of **cool2sea™** is its attractive light green hue that most find soothing, many find vision enhancing and all find distinguishing. Exclusively from **4U2SEA™**, **cool2sea™** is “the next generation of marine enclosure!”

clear2sea™ UV

PATENT PENDING

clear2sea™ UV acrylic blocks 98% of **all** Ultra Violet light and is clearer than glass. Those wanting the traditional clear look combined with high-tech advancements giving UV protection, longevity, clarity and distortion free visibility with the ability to buff out scratches that may occur will want **clear2sea™ UV**. Available exclusively from **4U2SEA™**, **clear2sea™ UV**—the future is now.

Acrylics do not create the polycarbonate rainbow effect. Acrylics offered by the **4U2SEA™ Fraternity** are ten times more break resistant than conventional acrylic yet retain the scratch resistance often sacrificed by other products without the need for a coating, and if scratches do occur they can be buffed out easily.

Your Assurance!

The **4U2SEA™ Fraternity** is here to put your mind at ease. Every Member of the Fraternity is committed to making your enclosure extraordinary. In addition, this means that wherever your vessel may travel a Fraternity Member will be able to take care of your needs. You should also know that the vast amount of collective talent making up the Fraternity includes a team Captain with some serious history (*see “Enclosure History!”*) and working with a Captain that already charted so much previously un-charted water is a real asset. His willingness and enthusiasm to work in a team effort to chart even further has been of immense value, as is having an open mind able to recognize contributions the aggregate Fraternity can make. The cumulative effort is evident in the new products developed. What’s more, the effort never stops and the boating public is the true beneficiary.

The numbered **4U2SEA™** sticker at the inside top corner of each panel is your **authentication** that only the finest materials are used and also identifies the origination of the panel quickly for future reference.
